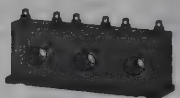
GIMA POWER METERING SYSTEM



Features:
- Four Model Types Designed to fit a Wide Range of Applications
- One Meter to Measure All Your Values
- DIN (96 x 96mm) Case Needing Only 2.80" (71mm) Behind the Panel
- Easy Installation - Software Detection/Correction of Wiring Errors
- Wide Backlit LCD Display for Easy Viewing
- Easy and Safe to Use - Four Keys Select All Parameters

A three-phase terminal style current transformer can be used with all the GIMA three-phase meters. Simpson's three-phase current transformer can be used to monitor AC current when the current level is too high for the meter. The current transformer is equipped with terminals to permit easy connection to the GIMA units. These terminals are #8-32 brass studs and come with a flatwasher, lockwasher, and a regular nut (leads are not provided).

A modbus module adds multi-drop serial communications to any GIMA meter. The device uses a high speed microprocessor to extract information from the meter and interface to an industry standard modbus system.

An Analog output module adds four DC 2-20 mA analog to any GIMA meter. All outputs are isolated from the metering elements to provide safe connection to external systems.

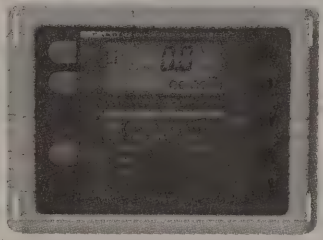
1623 AND 1625 GEO EARTH GROUND TESTERS

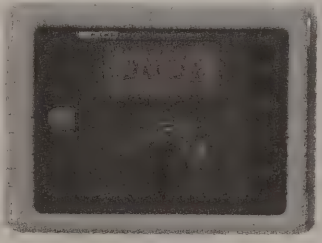
Fluke Delivers Stakeless Testing for quicker and more convenient Earth Ground Testing

The new Fluke 1623/1625 GEO Earth Ground Testers offer an innovative solution, called Stakeless testing, to make your earth ground loop resistance testing quicker and easier. The Fluke Earth Ground testers are able to measure earth ground loop resistances using only clamps. With stakeless testing, the earth ground rod does not need to be disconnected - leaving the bonded earth ground system intact during test. And gone are the days of spending time placing and connecting stakes for each earth ground rod on your system– a major time saver.

The Fluke 1623/1625 testers are indispensable troubleshooting tools to help you maintain uptime. With frustrating, intermittent electrical problems, the problem could be related to poor grounding or poor power quality. That is why it is highly recommended that all grounds and ground connections are checked at least annually as a part of your normal predictive maintenance plan.



Model 1625



Model 1623

Features:

Both the Fluke 1623 and 1625 can perform:
- Fall of potential testing (using stakes) (s- and 4- pole)
- 4 Pole Soil Resistivity testing (using stakes)
- Selective testing (using 1 clamp and stakes)
- Stakeless testing (using 2 clamps only)

The Fluke 1625 has additional features:
- Automatic Frequency Control (AFC): Identifies interference and chooses a suitable measuring frequency to minimize its effect, providing more reliable earth ground values
- R* Measurement: Calculates earth ground impedance at 55Hz to more accurately reflect the earth ground impedance that a fault-to-earth ground would see
- Adjustable Limits: For quicker testing

Included with the 1623/1625 Testers
- Fluke-1623 or Fluke-1625 tester
- Test Leads
- Batteries
- Manual

Included with the 1623/1625 Kit:

971 TEMPERATURE HUMIDITY METER

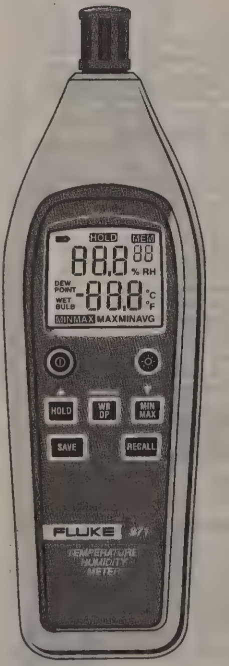
Quickly take accurate humidity and temperature readings in the air.

The Fluke 971 measures temperature, dew point or wet bulb from -20 °C to 60 °C (-4 °F to 140 °F, ±1.0 °F) and measures relative humidity from 5 percent to 95 percent, ±2.5 percent RH.

Its 99-point data storage capacity means users can take multiple readings and store them for later analysis. The Fluke 971 Temperature Humidity Meter features a liquid crystal display with backlight and a low battery indicator. The unit operates on four AAA alkaline batteries.

Temperature and humidity are key variables in determining the performance of HVAC systems and the comfort of building occupants. In addition, the accumulation of moisture can generate high humidity levels that foster the growth of bacteria and mold, which in turn can cause health problems, financial liability and costly remediation challenges.

With its pocket-size convenience and durability, the Fluke 971 gives HVAC technicians and building managers an accurate, simple tool to ensure HVAC systems are operating within specification. Industrial hygienists will find it useful for identifying conditions that encourage biological growth, and verifying that measures to control humidity are working.



Features:
- Backlit dual display of humidity and temperature
- 99 record storage capacity
- Ergonomic design with belt clip and protective holster
- Quick-response capacitance sensor with twist-open protective cover
- Compact and lightweight (190 g/6.7 oz)

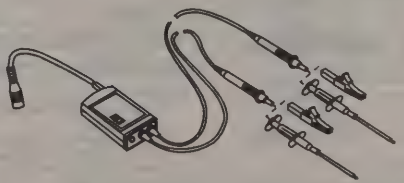
DIFFERENTIAL OSCILLOSCOPE PROBE

Pomona Model 6731 differential voltage probe allows users to safely make floating high voltage measurements while using general purpose oscilloscopes. Using a built-in differential amplifier, the floating signal is converted and scaled to a low-voltage signal referenced to earth ground. The probe can be used on circuits associated with electronic high-power converters, motor speed controls, switching mode power supplies, and other high voltage circuits requiring isolation.



Features:
- Switchable attenuation of 20:1 and 200
- High impedance to ground for both positive and negative side of the balanced input
- Maximum differential voltage up to 1000V
- Bandwidth from DC to 20 MHz (-3 dB)
- Risetime: 17.5 ns
- The probe input uses shrouded banana test probe tip
- The output to the oscilloscope is made with a BNC cable with a safety insulated BNC male connector

Included with the 6731:
- Large jaw alligator clips (one red, one black)
- Pin-Grabber test clips (one red, one black)
- 9V Alkaline battery

For quantities greater than listed, call for quote.

PTH RESISTANCE SOLDERING TOOL

The PTH stands for "Press To Heat" and means just that. This lightweight hand-held electrical resistance soldering tool uses its pliers' action to supply instant heat, making jobs easier, quicker, and cleaner than the traditional irons. When heating on High, the tool will draw up to 30 amps at no load resistance. The engineered carbon electrodes are standard, but alternative wire electrode tips are available to reach those tight places.

Tip Polishing Bar

The inexpensive Plato® Polishing Bar restores detinned tips for additional service. Normally, detinned tips (those unable to hold solder) are discarded. If the tips are not pitted or worn, buffing with the Plato® Polishing Bar will clean the tips and restore new life.

Desoldering Tip Cleaning Tool

This handy maintenance tool is used to remove unwanted solder and flux "build-up" from desoldering tip ID'S and from solder collector paths. Just select the proper diameter rod from the Plato® tool and push out any unwanted loose particles or solder from the desolder tip or collector path. Proper daily maintenance of all desoldering equipment minimizes premature tip clogging and will ensure improved performance.

Water Soluble Wire Solder

Water soluble cored wire features a halide-activated system that has been neutralized with an amine. The aminehydrohalide provides a high activation level that produces excellent tarnish or oxide removal, and maximum capillary action, leading to faster wetting, and reducing the chances of thermal degradation of the boards materials. Any flux residue from this solder is readily soluble in hot water.

Features:

- Highly activated water soluble flux cored wire.
- High Activity Level and Very Good Wetting
- Good Thermal Transfer Reduces Oxidation of Solder Iron Tip.
- Post-Process Residues Easily Cleaned in Hot Water.

2300 SERIES DUAL CONDUCTOR CORDS

3M™ Dual Conductor Ground Cord is part of a personnel ground monitoring system. The 3M™ Workstation Monitors Models 724, 725, and 790 use a dual conductor type wrist strap system consisting of a dual conductor wristband and ground cord. The dual system allows for a monitored loop resistance measurement, which includes the wristband contact to the wearer and a redundant grounding path. If one conductor of the system fails, the other can still function maintaining the grounding of the person. As a result, this prevents static from being generated by the person, eliminating possible exposure to static-sensitive electronic components. The 2300 series are compatible with all existing 3M dual conductor fabric, metal, and thermoplastic wristbands.
